**PRE-ANESTHETIC AND SURGICAL RELEASE**

Please Read Carefully and Sign

Client Name \_\_\_\_\_  
Pet's Name \_\_\_\_\_

Date \_\_\_\_\_  
Procedure \_\_\_\_\_

I the undersigned owner hereby authorize any emergency medical or surgical treatment deemed necessary for the health and well being of my pet \_\_\_\_\_ during its stay at the Dr. Michael Hutchinson D.V.M., P.C. facility. I further understand that, regardless of age, Dr. Michael Hutchinson D.V.M., P.C. strongly recommends a pre-anesthetic blood screen. Our doctors use safe anesthetic and surgical protocols to minimize risk to your pet. No anesthetic or surgical procedure, however, is completely without risk. Although modern veterinary anesthetics are generally considered safe, problems can still occur. Complications from an anesthetic may range from mild nausea to prolonged recovery due to an organ problem (kidney or liver), to very rarely, death. The importance of these tests is to help us uncover any underlying problem that may affect your pet's ability to safely undergo anesthesia. We strongly advise that these tests be done.

**Pre-Operative Blood Work:**

<u>Recommended for:</u>	<u>Blood Values Examined</u>	<u>Fee</u>
<input type="checkbox"/> <b>Healthy</b> pets up to 7 years of age.	Prep II (mini chem.) with CBC	\$105
<input type="checkbox"/> All patients over 8 years of age <i>and/or health problems</i>	CBC/ Chem to Complete CBC/Chem/T4/urine check	\$128-203

*Level of bloodwork may be subject to change by discretion of Doctor depending on conditions.*

I would like Dr. Michael Hutchinson D.V.M., P.C. to perform a pre-anesthesia blood screen on my animal listed above. I understand I will be charged the above fee for this service.

## Gardens VETERINARY HOSPITAL

### **All surgeries performed at Animal General will be charged for the following services:**

#### **Post-Operative Pain Control:**

Pain control can greatly improve both comfort and healing during the post-operative recovery period. Pain management ranges from in hospital injections and/or oral medication sent home with the patient. Charges will vary on weight and route of administration.

#### **Intravenous Catheterization and IV fluid therapy:**

These allow us to maintain blood pressure, replace blood loss, speed recovery, and administer life-saving drugs in case of an emergency. The cost is \$74

#### **Post-Operative Laser Therapy:**

The post-operative laser treatment is used for most elective procedures to help with pain management at the incision site, decreasing inflammation and to increase healing time.

**I understand that both pain management, intravenous catheterization, fluids, and possibly laser therapy will be applied to the surgery bill.**

#### **Optional Microchip Permanent Identification:**

This is an excellent way to permanently identify your pet should they become lost or stolen. Microchipping is performed easily while your pet is sedated for surgery.

Cost to implant is \$40, plus additional fee through the company to register the chip.

Yes, I would like my pet microchipped during anesthesia. I understand I will be charged the additional fee.

I decline the microchip at this time.

#### **Additional routine screening tests:**

##### **Cats:**

FeLV / FIV blood test \$48 (Feline Leukemia Virus and Feline Immunodeficiency Virus)

##### **Dogs:**

4Dx Snap Test \$48.00 This tests for Heartworm, Lyme diseases, Anaplasmosis and Ehrlichia. This test is recommended every 12 months, but is required every 24 months by hospital policy.

I decline routine tests for my dog or cat.
